Install Photoshop The Mac port of Photoshop is currently available for download at no cost. However, a subscription is required if you wish to use Photoshop's professional features such as the Image Processor. How to Install Photoshop on a Mac The following steps will help you install Photoshop on the computer. To install Photoshop on your Mac, you need to download the software from the Adobe website. Once downloaded, the installer will appear on your desktop and you can double-click on it. After starting Photoshop, you'll see a welcome screen letting you know that you need to login to Adobe. You can use your Adobe ID login that you created when you installed Photoshop. You'll be prompted to enter the four digits shown in the screenshot above. You will then have to wait for Photoshop to finish installing. If you want to delete Photoshop from your Mac (say, because you no longer use it), you'll need to open the App Store and go to the left-hand "More" tab to select "Installer." Select "Applications" to open the "Applications" tab. Scroll down to the bottom of the screen and select Photoshop. Click "Free Up Space," and then click "Install." Once the download has completed, you'll have to restart your Mac for Photoshop to start. Once Photoshop opens, you'll need to log in to your Adobe ID and select the "Adobe Cloud" tab. The software will then automatically access your computer's Internet connection. You'll then be asked to sign into your Adobe ID and Adobe Creative Cloud account if you haven't done so already. Once you do, you'll be prompted to add a credit card to your account. Once you've added the card, you'll be asked for your name and billing address. Once you've provided all the information, you'll be taken to a page that will ask for your card information again, just in case it got lost. Once the payment has completed, you'll be taken back to the Adobe Creative Cloud site to make sure that the purchase was successful. ### What's New In?

The Gradient tool allows you to create a smooth color transition between one area and another. The Pen tool allows you to precisely draw or paint with many different pens. You can use it to edit images, create artistic lines, or sketch subjects. You can also use any brush as a pen. The Paint Bucket tool is a variant of the Brush tool. This allows you to fill an area with a color. The Eraser tool allows you to delete or correct areas of an image. You can also make new image areas transparent, creating a composite image. The Hand tool allows you to rotate, stretch, and reshape an image. The Lasso tool allows you to quickly select a small area of an image, making it easy to add or remove objects, change colors, and so on. The tool also allows you to draw a path. The Magic Wand tool allows you to select any area of an image you want. It automatically selects all areas of an image that are similar to the selected area. You can easily erase unwanted areas, repaint images, correct misspelled text, and otherwise make changes to a large area of a given image. The Zoom tool allows you to focus on a specific area of an image. The Spot Healing Brush tool restores deleted areas of an image that have fallen off the image. It can also spot-heal partially deleted or faded areas of an image. The Mini Healing Brush tool works like the Spot Healing Brush, except that it doesn't expand from the area you click. You can select and edit a pixel by pixel basis using the Brush tool. You can use brushes for any of the most common painting effects in Photoshop, as well as for editing many different styles, including cartoon, portrait, realism, and illustration. Different brush types include: Sponge: A soft brush that makes the surrounding area partially transparent and helps blend existing colors. Reflective: A reflective brush with a medium shadow value. It can be used for realistic soft light effects. Orange: Like the Orange color, but with a color's hue increased from yellow to orange (see 'Orange Color' at right). Linear: A brush that approximates a straight, clean line with gradually changing color. Soft: A brush with a light softness, similar to the Sponge brush, but with variable control.
