Autodesk ReCapDraw Automate CAD with ReCapDraw Sharing CAD AutoCAD allows sharing of drawings among users connected to a network, using AutoCAD's network rendering features. Sharing within a network allows one user to make changes to a drawing and then automatically update the drawings in the other users' computers. Furthermore, AutoCAD is capable of setting up a network that allows users to work on drawings that are stored on a server rather than locally. The shared drawing is represented by a project link to the other users' computers, providing an updated drawing in the form of a file. A project link can also be created to work on a drawing on the cloud, also known as desktop sharing. Users are provided with an updated file from a server that is stored on the cloud in a location accessible to the user. Users can review the file on their desktop, and can make changes to the drawing, which are immediately made visible to the users. This does not require a server to store the drawings. Project link is only available when the server on which the file is located has network rendering capabilities. When project links are shared, the project link is represented as a link icon in the project browser. The project browser displays any links that are currently active in the drawing, regardless of their location. Project links are not limited to sharing drawings. In addition, one user can publish his or her own drawings to a server on the cloud, in order to provide other users with access to them. In this way, the user who created the drawing can generate a user link that can be used to view the drawing. When the server on which the drawing is stored has network rendering capabilities, the server can cache a file on its own storage, making it available for any user who has access to the server. When project links are stored on a server, any changes to the file on the server are reflected in all project links. Network

rendering in AutoCAD 2011 and newer The first AutoCAD network rendering capabilities were introduced in AutoCAD 2008 and were limited to those drawing files stored on the AutoCAD server. Network rendering was enhanced in AutoCAD 2010 with the introduction of project links, which allowed users connected to the AutoCAD network to open project links to the drawings that were stored on the AutoCAD server. In AutoCAD 2011, AutoCAD introduced client rendering capabilities, which is also known as 'network ca3bfb1094
